4. Write a Java program that takes the numbers as input to calculate and print the average of the numbers.

Input first number: 10
Input second number: 20
Input third number: 30
Input fourth number: 40
Enter fifth number: 50
Average of five numbers is: 30

```java
import java.util.Scanner;
public class Exercise4 {
    int a,b,c,d,e ;
    public static void main(String[] args)
     {
        Scanner scnr = new Scanner(System.in);

        System.out.println("Input first number");
        int a = scnr.nextInt();

        System.out.println("Input second number");
        int b = scnr.nextInt();

        System.out.println("input third number");
        int c = scnr.nextInt();

        System.out.println("Input fourth number");
        int d = scnr.nextInt();

        System.out.println("Enter fifth number");
        int e = scnr.nextInt();

        System.out.println("Average of five numbers is" + " " +(a+b+c+d+e)/5);
    }
}
```
